

## MILITARY AND NAVAL CONSTRUCTION ACT

JULY 3 (legislative day, JUNE 27), 1952.—Ordered to be printed

Mr. LONG, from the Committee on Armed Services, submitted the following

## REPORT

[To accompany H. R. 8120]

The Committee on Armed Services, to whom was referred the bill (H. R. 8120) to authorize certain construction at military and naval installations, and for other purposes, having considered the same, report favorably thereon with amendments and recommend that the bill, as amended, do pass.

## PURPOSE OF THE BILL

The purpose of this bill is to provide construction authorization for specific projects required by the Armed Forces within the United States and at overseas locations and to authorize the appropriation of funds to construct these projects.

## DISCUSSION OF THE BILL

This bill was presented to the Congress by the Department of Defense in early May. The House Armed Services Committee immediately started detailed hearings which resulted in H. R. 8120 passing the House of Representatives on June 12, 1952.

As originally presented by the Department of Defense the bill would have authorized a total of \$3.027 billion in military construction broken down as follows:

	Within United States	Outside United States	Classified facilities	Total
Army-----	\$178,809,000	\$68,617,000	\$26,310,000	\$273,736,000
Navy-----	174,044,000	34,839,000	23,972,000	237,855,000
Air Force-----	859,991,000	139,099,000	517,071,000	1,516,161,000
Providing in whole or in part for installations in foreign countries for all services-----				1,000,000,000
Total-----				3,027,752,000

As passed by the House of Representatives the bill would provide a total of \$2.75 billion authorization broken down as follows—

	Within United States	Outside United States	Classified facilities including those in foreign countries	Total
Army.....	\$171,664,000	\$68,617,000	\$143,010,000	\$383,291,000
Navy.....	164,514,000	34,839,000	86,397,000	285,750,000
Air Force.....	844,240,000	111,099,000	1,133,938,000	2,089,277,000
Total.....				2,758,318,000

The reduction by the House of Representatives of approximately \$250,000,000 was, for the most part, accomplished by eliminating from the bill this amount of authorization as the United States contribution toward the NATO air base program. Each NATO country makes a contribution toward these bases. Contributions have been divided into slices or annual segments. The first slice was approved in Brussels in 1950 and provided for no United States contribution. The second and third slices were approved at Ottawa and Lisbon, respectively, and did contain substantial United States contributions. A fourth and fifth slice are contemplated to round out the basic air field support requirements. Earlier contributions by the United States have been made from Mutual Security funds, because at the time they were needed these were the only funds that were quickly available. As pointed out in the House report on this bill, this authorization was deleted and it has not been reinstated by the committee.

The committee, during the consideration of the present bill, was mindful of a letter from the President of the United States warning against anticipated reductions. The committee does not agree with the statement contained therein to the effect that the authorizations had been pared down as much as national security would permit. This is particularly true insofar as requests for authorizations for military construction within the United States are concerned.

A breakdown of the authorization recommended by the committee is as follows:

	Within United States	Outside United States	Classified facilities including those in foreign countries	Total
Army.....	\$116,865,800	\$68,617,000	\$135,019,000	\$320,492,800
Navy.....	137,043,000	32,295,000	86,397,000	255,735,000
Air Force.....	708,352,000	92,610,000	1,012,398,000	1,813,360,000
Total.....				2,389,587,800

In the opinion of the committee, the reductions made will not prevent a single plane from flying, a single gun from firing, or a single ship from sailing. In some cases the recommendations relate to deferring worthy projects which, although desirable, are not essential at this time. In other cases the recommendations require the use of present facilities for a few more years before they are replaced by more modern and suitable structures. In many cases the recommendations involve the use of less elaborate designs and standards.

Public Law 155, Eighty-second Congress, first session, provided substantial authorizations for the Department of the Air Force to

provide facilities for the 95 wings envisaged at that time, and appropriations have been made against these authorizations. With the further expansion of the Air Force the scope of many of the Air Force bases has been increased or modified. During the hearings on the bill the Air Force requested authority to reprogram and use approximately \$90 million of available funds at 40 bases for facilities not now authorized or requested in this bill and without canceling any existing authorizations. The committee was informed that a subsequent request would be made for the authorizations needed. In other words, an authorization request would be submitted to the Congress for projects already constructed. The committee believes that any modification of authorizations and the expenditure of funds against these authorizations should be presented to the Congress as a legislative proposal rather than simply advising a committee of the Congress of the proposal and requesting authority to proceed. Consequently the committee does not approve the request of the Air Force for the reprogramming of funds and authorizations at the so-called "zero bases."

In making the reductions recommended, the committee established certain "ground rules," discussed in some detail hereafter, which it has applied equally to all projects. In some instances, application of these criteria resulted in heavy reductions on some projects, while others remained unchanged; in any event, the formulas were equally applied to all projects. The committee had before it many thousands of items and claims no infallibility; where mistakes may have been made, they can be corrected in the supplemental request which the Department of Defense proposes to submit to the Congress in January.

The committee has been severely handicapped in its consideration of the bill because of the late date of its submission to the Congress by the Department of Defense. The program was not submitted until May, leaving only a few weeks for the Congress to study multitudinous projects scattered over much of the world. The committee therefore had little opportunity to make the desirable field inspections and lack of time prevented it from developing many aspects of the construction practices of the services which deserve clarification and correction. The committee has deleted some items because the services were unable to furnish pertinent information which is necessary to an intelligent appraisal of the project. The hearings demonstrated in several instances, in the opinion of the committee, that the services were recommending installations involving many millions of dollars on an almost casual basis and without serious study of important elements which should have been given exhaustive research. The committee prefers to attribute this laxity to the pressure of time rather than to ineptness or inefficiency. Since the Congress already has been informed that there will be additional authorization for military public works requested during fiscal year 1953, the Department of Defense and the Bureau of the Budget are now placed on notice that the committee expects further programs to be sent to the Congress far enough in advance to allow sufficient time for full study by the Congress. In its study of this bill, the committee was forced to conduct hearings on an almost round-the-clock basis for 10 days in an

effort to present intelligent legislation to the Senate; even then there are additional economies which could have been realized had time permitted a more exhaustive study and more extensive field inspections.

The committee was appalled by the lack of coordination and overall direction of the military construction program by the Office of the Secretary of Defense. The sole concern of the Secretary of Defense for such tremendous expenditures appears to be directed to the fiscal aspects only. Apparently no effort has been made to place the requests of the services on a common basis.

When the committee first undertook the study of this bill, it addressed itself to the Secretary of Defense in writing, asking his assistance in paring down the program, suggesting either the assignment of priorities to the innumerable items involved or the submission of new requests in substantially less amounts. The Secretary of Defense subsequently informed the committee in writing to the effect that no reductions could be made and that every item was sorely needed unless the defenses of the country were to materially suffer. After lengthy hearings and a study of the justifications submitted by the Departments, the committee strongly disagrees with that position.

Because it believes that much of the waste in our military construction program as it is now constituted results from definite lack of overall coordination and supervision, the committee recommends the establishment of the Office of Director of Installations under a civilian head responsible directly to the Secretary of Defense and charged with the responsibility for the efficient and economical planning and execution of a military construction program which at the present time involves billions of dollars annually. It is not contemplated that this office will entail any operational functions, those remaining in the present military construction agencies. The Office, however, will be expected to provide common standards and criteria for construction within the Department and to coordinate particularly the Army and Air Force programs which are both prosecuted by the Corps of Engineers of the Army. It is the view of the committee that this office should be staffed with a very small but select group of highly competent engineers and construction personnel.

#### UNIT COSTS

The committee realizes that there are many items in the construction program that are not subject to comparisons because of the peculiar function which they are designed to perform. It would appear, however, that in the case of such things as housing, barracks, warehouses, office buildings, roads, and utilities there should be a uniform standard and price. For instance, for cold-storage warehousing the Army and Air Force estimates are predicated on a unit cost of \$20 per square foot; for similar storage the Navy request is \$32.50 per square foot. It appears to the committee that where cold storage is to be provided for the handling of meats, dairy products, and foodstuffs generally there is no reason for this wide disparity in unit costs. As a consequence, where usage appears to be on a common basis, the committee has applied the lowest unit cost requested. In the case of cold-storage space this is \$20 per square foot.

In other cases where different prices appeared, investigation by the committee has demonstrated that some prices requested by the services were completely unrealistic. One item in particular which involved many millions of dollars in this bill is warehousing. The Air Force and the Navy requested warehousing at a unit price of \$8.40 per square foot while the Army request is on the basis of \$7.50 per square foot. Investigation further reveals that there is reason to believe that warehousing in general is being overdesigned and built at much higher standards than would ordinarily be expected. Comparison with prices both in other Government agencies and commercial circles indicates that fully efficient warehousing meeting all hazard requirements, including weather and fire, can be provided on the basis of \$6 per square foot. All warehousing items in the request have been reduced accordingly. The committee is well aware that it might be necessary to redesign the warehouses and to establish less rigid criteria in order to meet this unit price.

It has been difficult for the committee to obtain clear-cut construction criteria. After reviewing the unit costs in comparison with similar commercial costs, it can only conclude that the services, insofar as their construction practices are concerned, are not designing structures on the primary basis of utility, particularly in the so called permanent type of structure. As an example, the Army requests authorization for a building to house a Finance and Adjutant General School at Fort Benjamin Harrison, Ind., at a cost of \$19.60 per square foot. The committee checked the unit cost of the recently completed General Accounting Office Building in Washington and found that it was built at a cost of \$12.50 per square foot. After considering increases in construction costs since the GAO Building was placed under contract, unit cost would be well below \$14 per square foot. The GAO Building is efficient and attractive and contains all modern conveniences. The committee does not feel justified in recommending authorization at Fort Benjamin Harrison of a building more elaborate than the GAO Building. As a consequence, the authorization for Fort Benjamin Harrison has been deleted and the Army is hereby advised that its future consideration will be dependent upon the type, character, and cost of the requested facility.

The committee has recommended substantial reductions in the medical facilities requested, particularly by the Air Force, because it believes the requests to be based on standards far too high and without consideration of the over-all health problem faced by the Nation. If the committee allowed the dental and hospital facilities requested by the Air Force, the result would have been to further seriously impair the supply of doctors and nurses available to the civilian populace. As an example, the Air Force requested dental facilities on the basis of 1 dental chair for every 500 men, whereas the civilian population has available to it 1 dental chair for every 1,700 population. That is not to say that the dental facilities available to our people generally are sufficient, but if we raise too drastically the standards in the armed services, we necessarily lower the services available to others. The reductions made by the committee will in its opinion provide ample facilities and services to the members of the Armed Forces with a

minimum of disruption and denial of service to the civilian population. The same comment in general applies with equal force to the request for hospital facilities and reductions have been made accordingly.

In connection with the medical program, the committee found that there has been little or no effort on the part of the military to jointly use existing facilities or to integrate its medical program with that of the Veterans' Administration. The committee established that there are veterans hospitals located very near military establishments which are partially utilized because of inability of the Veterans' Administration to obtain the necessary professional staff. Yet there had been no inquiry as to availability of these facilities by the Armed Forces, particularly the Air Force, and no effort made to work out arrangements for utilization of available bed space by the military. Where such conditions are known to exist, the committee has provided authorization for infirmaries. The Military Establishment will be expected to work out arrangements with the Veterans' Administration to utilize so far as possible existing facilities. In the future the committee recommends that the Military Establishment exhaust all reasonable efforts to use existing facilities before requesting large hospital complements.

#### ARMY BARRACKS

The committee heard testimony from the Army in some detail with respect to the rather large number of barrack spaces which it requested. At many installations substantial numbers of barrack spaces were requested, although existing facilities were more than enough to house the present strength and any foreseeable increase. As a general rule the barracks facilities available are of a permanent or semipermanent type.

The justification of the Army for this request is that it has calculated its construction capabilities in the event of full scale mobilization and finds that the demands upon its capabilities in the early stages of such mobilization will be in excess of its capabilities. It, therefore, proposes to take up this slack at the present time by the construction of barracks of a permanent type. Had the Army suggested that the slack be taken up in the heavy construction fields, such as ordnance production and other industrial facilities, it would have appeared more logical to the committee. The fact is that temporary housing represents the most simple type of construction and could be constructed promptly when required.

In the opinion of the committee, living quarters for our military men can be provided very quickly when the need arises and should not be constructed perhaps years in advance of their requirement. At bases where there is not sufficient troop housing space sufficient barracks have been allowed to make up the deficiency.

#### TROOP HOUSING

The committee found that as between the three services there is very little in common with respect to troop housing. On a cost-per-man basis the price varies widely. As an example, on the permanent

type barracks the Air Force requests \$2,000 per man while the comparable figure for an Army barracks is \$1,815 and the Navy \$2,100. The committee examined drawings and went into some detail as to specifications on the barracks requirements. It came to the conclusion that in general the troop housing is overdesigned. It believes that spacious and comfortable quarters can be designed and constructed on the average at a much lesser cost and therefore has reduced the unit cost per man for all three services to \$1,700 per man on permanent type facilities and \$1,400 per man on so-called 10-year construction. It is pertinent to observe that the Air Force was able to show only \$60 per man difference in cost between the permanent type structure and the 10-year structure.

The committee had before it a study of Air Force troop housing made since January by a subcommittee of the Committee on Expenditures in the Executive Departments of the House of Representatives headed by Representative Porter Hardy. The study revealed that the Air Force has substantially overestimated its barracks requirements.

Pertinent extracts from the report are:

The analysis showed that about 30 percent of the buildings for airmen's housing which the Air Force plans to construct would not be needed in the foreseeable future. At a simple 80 percent of troop strength 21.3 percent of the buildings are excess; on the basis of family housing needs reported by the Air Force to the Housing and Home Finance Agency 29.7 percent of the buildings are excess; on the basis of current experience in family housing 33.4 percent of the buildings are excess.

Two factors inflated the Air Force's estimates of dormitory requirements as presented to the Congress.

(1) The estimate of houses available in the communities at each base was grossly underestimated. \* \* \* (2) The second factor concerns the percentage of airmen for whom dormitory spaces are programmed. Although 30 percent of the airmen live off base with dependents, the Air Force policy was to build dormitories to accommodate at least 80 percent of its enlisted strength.

\* \* \* \* \*  
Based on a space allowance of 72 square feet per man it is estimated that there is a surplus of 25,808 spaces in the 1952 program, about \$51,616,000, and a surplus in the bill now before Congress of 16,051 spaces, about \$32,102,000.

Subsequent to this report, the Air Force instituted new dormitory planning criteria which will provide spaces for 70 percent of enlisted strength rather than the 80 percent heretofore provided.

The committee has, where applicable, made reductions at bases where the House committee found excess spaces being requested. It is pointed out that the Hardy committee report was not available, insofar as is known, until some time after House action on this bill.

The committee observes that there are other items in this bill requested by all three services which are excessive, but again lack of time has prohibited the necessary studies to arrive at a sound conclusion.

## BACHELOR OFFICER QUARTERS

The committee examined in some detail the requests for bachelor officer quarters. Cost per man for these quarters varied between the services, the Air Force asking as much as \$6,000 per man and the Navy as much as \$8,500 per man plus messing facilities. Such unit costs on a per-man basis appeared entirely out of line. When it is compared with the room costs of the leading modern hotels in the country it is found to be excessive. Bearing in mind that room costs in a hotel structure are based on the cost of the hotel divided by the number of rooms therein—which is to say that the per-room cost must absorb the cost of lobbies, restaurants, banquet rooms, kitchens, and other public facilities—the committee believes that adequate and comfortable quarters can be provided at a lesser rate and, therefore, has reduced the unit costs for all services to \$5,000 per man and expects the services to stay well within this limitation.

## ROADS—RAILROADS

In many cases the committee found that the standards for reservation roads were in its opinion far too high with resultant increase in costs. As a consequence, where road items appeared to be entirely out of line, reductions have been made. Spur tracks were found to be excessive in cost—based on unnecessarily high standards—and where so found were reduced to more reasonable figure.

## VEHICLE MAINTENANCE SHOPS

The testimony before the committee would indicate that our armed services are still plagued as they were at Anzio and Normandy with an overabundance of vehicles. An air base with a complement of approximately 2,000 men would have some 400 vehicles or 1 vehicle for every 5 men on the base, according to the testimony.

The committee believes that the requests for costly maintenance facilities for these vehicles is entirely unrealistic. In some cases the services were asking to replace existing facilities with more costly new facilities or were requesting additions to existing facilities. There was no evidence that any effort is being made to use private sources for contracting any vehicle maintenance which the committee believes in some cases could be done efficiently and economically and without impairment to the training of our troops. These items therefore have been carefully screened and construction of new repair shops held to the minimum consistent with efficient operation.

## HAMMONTON AIR FORCE BASE, N. J.

The committee recommends deletion of language in the bill which would authorize a military air transport base and depot at Hammonton, N. J. Considerable testimony was taken on this item. The committee does not believe that an installation of the type and

magnitude as this should be located in an area so close to the sea and in a general area where congestion is so heavy. It is believed that the Air Force should go further into this matter and examine other possibilities before proceeding with this project. The committee points out that similar facilities already exist in several other locations and that the delay entailed by a further survey will not jeopardize our military build-up. This project incidentally is the only one in the Air Force submission on which the facility would be located on a site where the Government at present has no equity. Every acre of land acquired would have to be purchased and there are no facilities on the proposed site which would be usable insofar as the committee could determine.

#### AIR UNIVERSITY, MAXWELL FIELD, ALA.

The academic building requested by the Air Force for its post-graduate school, the Air University at Maxwell Field, Ala., was unrealistic in cost. The unit cost requested was \$20 per square foot. If the university were not operating in vitally needed family quarters there would be good cause for deferring the item; however, the need is urgent and the facility is operating on the base with great difficulty. The committee therefore is allowing the item on a basis of \$15 per square foot, which it considers an ample amount to furnish a comfortable and utilitarian facility. The cost on this basis will be \$4,125,000 rather than the \$5,500,000 requested.

Since the new building will release quarters for occupancy, the bachelor officer quarters requested have been reduced to 275 units at \$5,000 per unit, including messing facilities. The remaining reduction is on utilities, in line with the other reductions.

#### DETAILED ANALYSIS OF THE BILL

The projects proposed for each location named in the bill are listed under general headings with a total authorization for that location. Each general heading may consist of numerous specific projects falling within that category. The subcommittee considered each specific project and reductions and deletions from the bill are on the basis of specific projects submitted in the construction program for each service. In order that the Department of Defense may be aware of the reductions or deletions recommended by the committee the following analysis is submitted.

## TITLE I.—Department of the Army
